2. General Description

The Lontium LT9711 is Dual-Port MIPI/LVDS to DP1.2 converter with internal Type-C Alternate Mode switch and PD controller.

The MIPI DSI/CSI input features configurable single-port or dual-port with 1 clock lane, and 1~4 data lanes operating at maximum 2Gbps/lane, which can support a total bandwidth up to 16Gbps. LT9711 supports both burst mode and non-burst mode DSI video data transferring.

For DP1.2 output, it consists of 4 data lanes, supporting RBR (1.62Gbps), HBR (2.7Gbps) and HBR2 (5.4Gbps) link speeds. The build-in optional SSC function reduces EMI effect on EMI-concerned system application.

In order to be adaptable to the USB Type-C ecosystem, LT9711 integrates a high performance bi-directional Super-Speed switch controlled by CC logic and PD management unit to relieve mobile system design complexity and BOM cost. The switch function is compliant with VESA DP Alternate Mode on USB Type-C Standard.

The LT9711 is fabricated in advanced CMOS process and implemented in a small outline 9x 9mm QFN76 package. This package is RoHS compliant and specified to operate from -40°C to +85°C.
